

DESIGNED WITH FLEXIBILITY IN MIND

At the forefront of any large enterprise is a plan for growth. With this growth comes the demand for a solution that allows for easy addition of new practice entities and quick changes in setup options. PrimeENTERPRISE has this flexibility – it can easily establish multiple configuration options for varying types of practices in the organization and add and remove practices from the enterprise.

Easily Adaptable to New Performance and Reimbursement Models

With the advent of new care delivery and outcomes-based payment models such as Accountable Care Organizations (ACO) and the Patient-Centered Medical Home (PCMH) being developed by the Centers for Medicare and Medicaid Services (CMS), PrimeENTERPRISE is readily adaptable to provide the continuum of care quality reporting metrics, administrative and billing functions these and other emerging performance measurement models require.

Who Uses PrimeENTERPRISE

PrimeENTERPRISE is used by organizations such as Management Service Organizations (MSO), Billing Services and Ambulatory Surgery Centers that need autonomy and separation among practices, while managing operations from a centralized location. Other groups, such as Independent Physician Associations (IPA), may also use PrimeENTERPRISE to provide services such as ACO/PCMH reporting, fee schedule updates and practice analysis.

Stark Changes and PrimeENTERPRISE

Because of Stark law changes that allow hospitals to invest in technology for physician offices, many hospital organizations are motivated to purchase PrimeSUITE® and offer it to practices affiliated with their healthcare system. In turn, with many practices using PrimeSUITE within a given area, PrimeEnterprise can be used to facilitate controlled sharing of data and master files by those practices.

Features

Interoperable ROI functions

- Claims processing
- Statements processing
- Payment posting
- Collections follow-up

Centralized master file maintenance

- Insurance
- Fee schedules
- Adjustment/ Procedure codes
- Providers
- Configuration files

Discrete data sharing

- Patient demographics and insurance
- Account balance
- Account flags
- Clinical summary

Enterprise level roll-up reporting

- Productivity analysis
- Reimbursement analysis
- Payer mix
- Denial analysis
- Clinical condition analysis
